

New BIRCO products for landscaping Innovative channel systems and point drainage units

BIRCOslim® – the name actually says it all

The BIRCOslim® will – of this we are sure – become a classic landscaping product. We have the everything when designing this channel: it is slim, lightweight and easy to install. And all this best BIRCO quality: vibrated-pressed concrete in C40/50 grade combined with our steel angle Featuring a special zinc/aluminium/magnesium coating (Magnelis®), they provide significantly improved corrosion protection, particularly in environments containing ammonia. The surface protection lasts up to seven times longer, whilst even better values are achieved in the cutting edge area. The mix makes the difference! Less zinc, meaning less of this raw material is washed away: hence we have thought of everything, even

The BIRCOslim® comes with an attractive range of covers and complete accessories, from the outfall unit to the end cap. For this product too we offer the BIRCO factory service, with advice and calculations through to drilling and cutting channels and covers.

Our lightweight product withstands quite a lot. The BIRCOslim® can be safely used up to load class C 250, thus covering many areas in the landscaping sector A perfect addition to our drainage portfolio when it comes to lightweight yet equally high-quality and long-lasting solutions. As a new product in our landscaping drainage range, the BIRCOslim® will be available directly from stock as of January 2023, and therefore always to hand at your construction site when needed. The BIRCOslim® is **Made in Germany**.

(Pin)point drainage with BIRCO

Sometimes you simply have to make a point – that also applies to landscaping. On pavements or in driveways, a point drainage unit is always an elegant idea for draining off rain water in a targeted manner. Nothing new for us – yet at this point we have something new for you.

Lightweight, simple and sturdy. Often, nothing more is needed. With the new BIRCOplus point inlet, that is precisely what we provide. The user-friendly system is good quality, easy to handle and perfect in terms of drainage capacity. Supplied as a set with clamped-on grate, odour trap, silt bucket and PVC pipe connection, the point inlet comes with everything needed for good drainage – without frills.

Or perhaps with frame and cast cover? We have added a point drainage unit to the BIRCOlight® too. And here as well we offer a complete set, yet with high-quality cast frame with cathodic dip coating and clamped-on cast cover. Perfectly prepared for installation on site, naturally with odour trap, silt bucket and PVC pipe connection.

The choice is yours. And it is always a good choice, that's a promise!

BIRCOlight® point drainage

BIRCOplus point drainage

Proven quality in a new design

It is no longer possible to imagine the landscaping sector without our BIRCOlight® drainage system. What could possibly be added here?

BIRCOlight® with **DI casted angles**.

As always: good quality and with everything needed for the perfect design: covers, outfall units and accessories. At this point we would like to say a word about quality: our BIRCOlight® drainage channels are made of the best C 40/50 concrete and equipped with DI cathodic coated casted angles. Stability and corrosion protection perfectly combined. Bolt connections that last: our reliable M8 threaded connections (4 per metre) are another quality feature. The shift protection system on our covers ensure that everything stays where it is. The BIRCOlight® with DI angles is the right decision, it is safe to say.

BIRCOslim® | The lightweight channel with strong features

In the landscaping sector, materials should be lightweight but also sturdy and resilient. The installation should be quick and easy. The BIRCOslim® comes with all of these attributes. High-quality C 40/50 grade concrete and yet a weight from 12.9 kg per metre of drainage channel. The sturdy steel angles come with a Magnelis® coating (zinc, aluminium, magnesium) and offer unbeatable corrosion protection. Because once these systems are in place, they need to last.

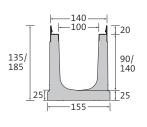

BIRCOslim® NW 100

BIRCOslim® drainage capacity

The BIRCO channel systems have excellent drainage capacities. Besides this table, BIRCO offers a project-related hydraulic calculation service.

BIRCOslim® N	W 100	
BL = 1000 mm	Drainage capacity at the end of the channel	Cross section at the end of the channel
Height 80 mm	1.91 l/sec	34.31 cm ²
No. 0/0	4.16 l/sec	74.85 cm ²
No. 10/0	6.85 l/sec	123.38 cm ²

These tables can only provide the required result in some cases, as the calculation is largely based on the local conditions, i.e. on the position of the existing drainage shafts, the number of runs etc. We therefore recommend our factory hydraulic calculation with an execution proposal.

No. 0/0	10.20 l/sec	183.55 cm ²
BL = 1000 mm	Drainage capacity at the end of the channel	Cross section at the end of the channel

Horizontal and vertical boreholes

Depending on the local circumstances, drainage channels sometimes have to be equipped with a borehole so as to be able to connect them to the sewer. BIRCO channels can be equipped at the factory with horizontal or vertical boreholes for direct inflows and outflows according to the planning specifications. The diameter is designed for channel basic pipes: other types of pipe on request.

BIRCOslim NW 100	Max. bore diameter					
Nominal width	Horizontal borehole maximum	Vertical borehole maximum				
100	DN 110*	DN 110				

^{*} from channel No. 10/0 upwards

BIRCOslim® NW 150

Boreholes must have a gap of at least 100 mm to the end of the channel.

BIRCOlight® with DI angles A perfect addition to the classic BIRCOlight® system

When it comes to the BIRCOlight® drainage system, we are talking about a classic in the landscaping sector. We now also supply our all-rounder with cathodic-coated DI angles. As always: good quality and with everything needed for the perfect design.

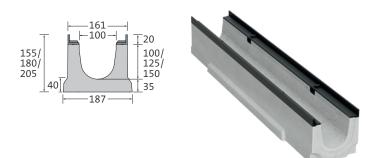

BIRCOlight® with DI angles | NW 100

BIRCOlight with DI angles® Drainage capacity

The BIRCO channel systems have excellent drainage capacities. Besides this table, BIRCO offers a project-related hydraulic calculation service.

BIRCOlight® with DI angles NW 100							
BL = 1000 mm	Drainage capacity at the end of the channel	Cross-section at the end of the channel					
No. 0/0	4.96 l/sec	89.0 cm ²					
No. 5/0	6.35 l/sec	114.0 cm ²					
No. 10/0	7.74 l/sec	139.0 cm ²					

BIRCOlight® with DI angles NW 150						
BL = 1000 mm	Drainage capacity at the end of the channel	Cross-section at the end of the channel				
No. 0/0	10.34 l/sec	186.14 cm ²				
No. 5/0	12.41 l/sec	223.42 cm ²				
No. 10/0	14.48 l/sec	260.69 cm ²				

BIRCOlight® with DI angles NW 200						
BL = 1000 mm	Drainage capacity at the end of the channel	Cross-section at the end of the channel				
No. 0/0	20.70 l/sec	372.64 cm ²				
No. 5/0	23.48 l/sec	422.66 cm ²				
No. 10/0	26.26 l/sec	472.69 cm ²				

These tables can only provide the required result in some cases, as the task is largely based on the local conditions, i.e. on the position of the existing drainage shafts, the number of strands etc. We therefore recommend our factory hydraulic calculation with an execution proposal.

Horizontal and vertical boreholes

Depending on the local circumstances, drainage channels sometimes have to be equipped with a borehole so as to be able to connect them to the sewer. BIRCO channels can be equipped at the factory with horizontal or vertical boreholes for direct inflows and outflows according to the planning specifications. The possible connections differ for the nominal widths and range from DN 110 to DN 200. The diameters are designed for KG pipes: other types of pipe on request.

00000

BIRCOlight® with D	l angles Max. bore	diameter
Nominal width	Horizontal borehole maximum	Vertical borehole maximum
100	DN 110*	DN 110
150	DN 110 / DN 160*	DN 160
200	DN 160 / DN 200**	DN 200

^{*} from channel no. 5/0 upwards, ** from channel no. 10/0 upwards Boreholes must have a gap of at least 100 mm to the end of the channel.

BIRCOlight® on private property

BIRCOlight® point drainage Open space drainage with high-quality ductile iron (DI) elements

Sometimes it simply has to be DI. We can now offer you this with the new BIRCOlight[®] point drainage with DI frames. Elegant appearance in refined and high-quality black for pinpoint drainage solutions.

BIRCOplus point drainage Lightweight, simple and sturdy

It doesn't take much to create a perfect open space drainage system with pinpoint accuracy. The new BIRCOplus point drainage does it all, at a weight of just 45 kg. Efficiency in a nutshell.

BIRCOlight® point drainage

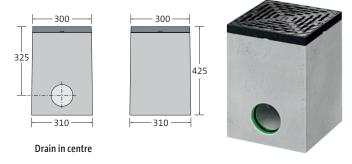

New design possibilities for squares and other surfaces.

Outfall unit 30/30 | 1-piece Aqua

- + Set with clamped-on cast cover
- + Cathodic-coated DI frame
- + DN 110 odour trap for PVC pipe connection
- + PP silt bucket
